Dear Sir or Madam:I am writing to you today to urge you to reject NAB's petition 04-160. Satellite radio is a new innovation that many consumers are welcoming and paying to receive. I am one of them. I believe that they are well within their rights to broadcast national content geared to different localities. If one were to say that was not their right, that would be like saying The Weather Channel should not be allowed to be broadcast.

Instead of working to better their own services, some broadcasters would like to see new technologies be stifled and that is unAmerican. Our economy and society thrives on competition, each of us making ourselves better to compete. Please reject the petition of the NAB, and let consumers make their choices.

Respectfully,
Doug Santurri
